 - 2. Fix Tips section:
 - 3. Fix History Section(Plugin will be required):
 - 4. Make Response grading/analysis flexible.
 - 5. Add support more type of Jobs/Job Descriptions(Not only Tech Based job like now)

Upgrade Agenda for HF Interview Coach

1. Bulletproof prompts and behaviour:

Make it check:

- Key requirements and skills needed should be present in the entered job description.
- qualifications required/preferred by the recruiter should be present in the job description
- if the entered job desc does not include the above, the job description is understood as faulty/incomplete then the model returns an error for which a simple python code will make Gradio display "Please enter a complete Job Description"

2. Fix Tips section:

{Trigger as soon as the question generation gets triggered} Make the LLM use the job description as a prompt to generate a set of appropriate tips and suggestions. This will be neatly formatted into a clean look.

3. Fix History Section(Plugin will be required):

- Remove History & Progress Section(Add a Download Option instead)
- Option to download Analysis/ History/ Responses as a pdf report.

This is so user can access their conversation analysis as and when they like.

4. Make Response grading/analysis flexible.

- Implement standards/expectations for response. Use a system where the model reads the job description and therefore creates a set of **keywords** it expects to be in the user's response.
- Without a satisfying percentage of the expected keywords being hit, the score shall not be anything above 5/10. Feedback must include advice to make the candidate use important keywords and appropriate terms.
- Expected Keywords in response to better score the response, and STAR format can be excused

5. Add support more type of Jobs/Job Descriptions(Not only Tech Based job like now)

- Make the model be flexible by scanning and understanding the field/industry the job description is of/from.
